

A regional resource for joint replacement, trauma, orthopedics and sports medicine problems

Decades ago an orthopedic surgeon would treat all types of joint problems. With ever-increasing new technology and treatment advances specific to different joints and bones, that's changed dramatically. Over the past 30 years, orthopedics has become super-specialized with surgeons now having advanced training in a specific body part.

One example is the use of new Robotic Surgery Technology. The joint replacement surgeons at Orthopaedic Associates of the Lakelands make use of Mako Robotic Surgery that improves the outcomes from hip and knee replacement. The technology enables the joint replacement surgeon to map out in advance of surgery the optimal cuts in

the bone for the best surgical outcome and to spare as much bone as possible.

The orthopedic team also recognizes the complex issues

related to caring for on-the-job injury. Treatment of the work-related injury is compressed and accelerated. The employer and case manager are informed of

the treatment plan and when the worker may safely return to the workplace.

Designated as a

**Blue
Distinction
Center®**

for Knee and Hip Replacement

THE JOINT CENTER at Self Regional Healthcare is credentialed by Blue Cross Blue Shield as Blue Distinction for Knee and Hip Replacement and receives Blue Cross spine patients from across the State of South Carolina. CareChex quality rating agency named Self Regional Healthcare as one of the top 10% of hospitals in the United States for major joint replacement.
